Lab 02 - Gitlab project planning

In this lab work you will plan works for your project.

Issues

Issues are tasks, features, bugs or epics in a project. Create an issue in Gitlab.

- Go to Issues and create new issue
- Fill in title, type, description, assignee, due date, milestone, and label
- Issue types:

```
> Issue: For general work
> Incident: For investigating IT service disruptions or outages
```

- Label: for easier to type of problems
- Milestone: for categorizing the works
- Assignee: The one responsible for the work done.

Issue boards

The current issues list to done for current sprint.

Wiki

Pages used for documenting the software or features.

Task 1: Issues for online-shop website

Create issue for an online shop website. You need to visit an online shop website and then observe the features of it and records them as issues.

Task 2: Milestones for online-shop website

Try to categorize the issue into multiple milestones.
