

Lab 07 - Project planning and estimation

In this lab you will be asked to estimate and plan a whole project.

The project can be selected from the list below or you can propose your own project (subject to approval).

Programming Language: Java

Platform: Console application or Desktop application (JavaFX or Swing)

Deadline: 4 weeks

Important dates:

- Project planning submission: End of 1st week
- Progress update submission and presentation: End of 2nd week or start of 3rd week
- Final project submission and presentation: End of 4th week or start of 5th week

Project selection: non-redundancy.

Plan: Estimate the project using Top-down estimation.

Detail plan: Make detail estimation using bottom-up estimation.

Progress update every week

- What are tasks done last week?
- What are tasks to be done this week?
- What are the problems (stuck)?

Projects

There are 13 projects:

1. **Personal Finance Manager:** Develop an application that helps users track expenses, income, and savings goals with charts and reports.
2. **Task Automation Tool:** Create a desktop application that automates repetitive tasks (like file management) using scripting and a user-friendly interface.
3. **Markdown Note-Taking App:** Build a note-taking application that supports Markdown formatting, allowing users to organize and export notes easily.
4. **Recipe Organizer:** Design a desktop app where users can save, categorize, and search for recipes, including features for meal planning.
5. **Time Tracker:** Develop a desktop application that tracks time spent on different tasks and projects, providing reports to improve productivity.

6. **Event Management Platform:** Create a console application that allows users to create, manage, and RSVP for events, with features like ticketing and responses.
7. **Test Management System:** Build a platform for educators to create courses, manage students, and track progress, complete with quizzes and forums.
8. **Collaborative Document Editor:** Develop a console-based tool that allows multiple user to open and edit documents.
9. **Travel Planning App:** Create a desktop application that helps users plan trips, allowing them to search for destinations, create itineraries, and share plans with others.
10. **Attendance Dashboard:** Build a dashboard that can mark the attendance, listing attendees, sort, filter and allowing users to manage attendance records.
11. **Health Tracker:** Develop a desktop app that syncs with a web application to track health metrics, allowing users to visualize their data over time.
12. **Budgeting Tool:**Create a desktop application that enables users to manage their budgets offline.
13. **Inventory Management System:** Build a console application for small businesses to track inventory levels, orders, sales, and deliveries.
